

A Simple Guide to Fatty Liver, Treatment and Related Diseases (A Simple Guide to Medical Conditions)

Introduction Ode to Fatty Liver Fatty liver means that excess fat builds up in liver cells. This does not mean the person with fatty liver is unwell One of the most common causes is overweight or obesity The other cause is a person having diabetes or prediabetes Other metabolic cause is high blood pressure or hypertension Other causes are rapid weight loss and certain medications There are high blood fat levels or hyperlipidemia, Metabolic disease such as hypobetalipoproteinemia Symptoms include fatigue and severe tiredness Often there weight loss and generalized weakness Others has jaundice with yellowing of the eyes or skin Some has liver enlargement and persistent itching Treatment of Fatty liver is mainly weight reduction Taking medication to control hypertension Lowering the cholesterol and triglycerides Taking antioxidants or controlling the diabetes -An original poem by Kenneth Kee Interesting Tips about the Fatty Liver A Healthy Lifestyle 1. Take a well Balanced Diet 2. Treatment of Fatty Liver: For Fatty Liver without any other medical problems, there is no need for any special treatment. But making some lifestyle changes can control or reverse the fat buildup in the liver: a. Losing weight b. Lowering the cholesterol and triglycerides c. Controlling the diabetes d. Using medication, such as over-the-counter (OTC) drugs e. Avoiding alcohol If you have NASH, no medication is available to reverse the fat buildup in the liver. In some cases the liver damage stops or even reverses itself. But in others the disease continues to progress. If you have NASH, it is important to control any conditions that may contribute to fatty liver disease. Treatments and lifestyle changes may include: a.. Losing weight b. Medication to reduce cholesterol or triglycerides c. Medication to reduce blood pressure d. Medication to control diabetes Some medications are being studied as possible

treatments for NASH. These include antioxidants like vitamin E. Some new diabetes medications for NASH that may be given even if you do not have diabetes.

3. Keep bones and body strong Bone marrow produces our blood Eat foods rich in calcium like yogurt, cheese, milk, and dark green vegetables. Eat foods rich in Vitamin D, like eggs, fatty fish, cereal, and fortified milk. Eat food rich in Vitamins B and C such as green vegetables and fruits Zinc and other minerals are important to the body
4. Get enough rest and Sleep Avoid stress and tension
5. Exercise and stay active. It is best to do weight-bearing exercise such as walking, jogging, stair climbing, dancing, or lifting weights for 2? hours a week. One way to do this is to be active 30 minutes a day at least 5 days a week. Begin slowly especially if a person has not been active.
6. Do not drink more than 2 alcohol drinks a day for a man or 1 alcohol drink a day for a woman. Alcohol use also increases the chance of falling and breaking a bone. Alcohol can affect the neurons and brain cells.
7. Stop or do not begin smoking. It also interferes with blood supply and healing.

Chapter 1
Fatty Liver Disease Fatty liver disease means that there are fat deposits inside the liver which may keep the liver from removing toxins from the blood. Doctors divide fatty liver disease:

1. If you just have fat but no damage to the liver, the disease is called nonalcoholic fatty liver disease (NAFLD).
2. If you have fat in the liver plus signs of inflammation and liver cell damage, the disease is called nonalcoholic steatohepatitis (NASH).

About 10 to 20 percent of Americans have NAFLD About 2 to 5 percent have NASH Doctors think that obesity is the most common cause People who drink too much alcohol may also have fat in their liver but that is not the same as fatty liver disease
