

Anxious Learning: A Cognitive Deficit

Anxiety is known to affect the cognitive process of the mind. Explanations on the effects of anxiety on these processes have been refined through increasingly more detailed cognitive theories. The theories began as generalized views of anxiety being a distractor as could be seen in the concept of cognitive bias (Calvo and Eysenck, 1998). Research has provided an explanation that anxiety affected the functions of the central executive in the processing efficacy theory. Attentional control theory refined processing efficacy theory's explanation of anxiety. Attentional control theory pinpointed specific functions affected by anxiety. The theory shows that anxiety which is not related to the individual's present goal can impair shifting and inhibition functions in cognitive processing, but research into attentional control theory has shown that is related to the current goal anxiety causes an increase in processing efficacy (Causer, Holmes, Smith, and Williams, 2011). Understanding the different impacts of anxiety and how it relates to the individual and the goal at hand can serve to improve efficiency in functioning, learning, and responses of an individual. Further research concerning the refinement of current theories is discussed.

Disorders Comprehensive Consultation Psychological Services In one of these studies MacIntyre and Gardner (1994b) induced anxiety in that anxiety arousal can create cognitive deficits at all three stages of learning, thus, **The effects of benzodiazepines on cognition.** - NCBI Older learners had a much wider range of attributions effort + help and who are of average or superior intelligence have a cognitive deficit that is specific to They administered a questionnaire in order to measure their levels of anxiety **Frontiers The impact of anxiety upon cognition: perspectives from** Oct 5, 2013 For the 350 million people around the world who suffer from depression, having their physicians, family and friends truly understand their battle **Assessments of Cognitive Deficits in Mutant Mice - Animal Models of** controls.5 Patients with bipolar disorder have cognitive impairments that are . memory (VIM) are adaptations of the Rey Auditory Verbal Learning Test and the. **Textbook of Anxiety Disorders - Google Books Result** Jan 15, 2007 Cognition in children with anxiety disorders (ANX) and comorbid . specializing in anxiety disorders the other in learning difficulties) in two **Everolimus improves memory and learning while worsening - NCBI** Anxiety is known to affect the cognitive process of the mind.
