Herb Gardens have been considered to be a very valuable part of the garden, for centuries. Monks and nuns in medieval times were very proud of their herbal gardens and most of all, they knew all about the curative property of these herbs. They also knew that these herbs were very valuable, in matters of taste, and aroma when added to hitherto bland dishes. Since ancient times, man has known all about the power of herbs, as a medicine, as a food additive and as an easily cultivated plant resource in his garden. Spices may have been rare to obtain. One needed to travel to all corners of the world to get exotic spices. But herbs, native herbs were easily available in the wild as long as you recognized them. And then you could bring back their cuttings, or their seeds and plant them in your own garden. And they flourished there, ready to be picked and to be used in ones own culinary delights and delicacies coming out

fresh from the kitchen. This book is going to tell you how you can grow herbs organically. Organically means, that you are going to use natural and traditional ways in which to cultivate these plants. You are not going to use any chemical fertilizers on them. Instead, you are going to be using animal manure and compost as well as other natural products in order to make your herbs grow in the way nature intended their growth.
