

Injury Prevention and Control

At least 5 million people die each year from injuries, and about half the deaths in the 10-24 age group are accountable to them. This is a major health problem for which a number of strategies for prevention and control can be developed. This book presents a series of the plenary and state-of-the-art presentations from the 5th World Conference on Injury Prevention and Control. There is a focus on transportation, workplace, sport and leisure, and domestic sectors, and an exploration of the legal, medical, environmental, safety and governmental issues which play a part in the subject. Practitioners and researchers in a variety of activities, including epidemiology and public health, occupational health and safety, ergonomics and product design, medicine, criminology, engineering and physical sciences, and the behavioural sciences, should find this a useful and challenging work.
