

Extensional Tectonics: Faulting and Fault-Related Processes (Key Issues in Earth Sciences)

This book forms the second of a two part volume containing a compilation of 35 classic papers on extensional tectonics, with particular emphasis on petroleum-related features. Each part comprises a set of scientifically significant papers from the last 20 years taken from the Journal of the Geological Society and various Special Publications of the Geological Society. The present volume focuses on faulting and fault-related processes under the headings: Geometry and Spatial Attributes of Normal Faults; Active Normal Faulting and Seismicity; Analogue Modelling; and Intra-Reservoir Faulting and Fluid Flow. The book begins with a new scientific and historical review of the subject and the context of the papers contained therein. By compiling some of the most important papers on extensional tectonics Bob Holdsworth & Johnathan Turner have created a volume intended for a wide readership. It is of special relevance to MSc and PhD students working in any Petroleum-related scientific field and to Petroleum industry geoscientists around the world. It is also of great use to undergraduates studying courses on Structural Geology/Tectonics, Petroleum Geology, Basin Dynamics etc. Also available: The Internal Structure of Fault Zones: Implications for Mechanical & Fluid-Flow Properties - Special Publication no 299 - ISBN 1862392536 Flow Processes in Faults And Shear Zones (Geological Society Special Publication) - ISBN 186239153X The Geological Society of London Founded in 1807, the Geological Society of London is the oldest geological society in the world, and one of the largest publishers in the Earth sciences. The Society publishes a wide range of high-quality peer-reviewed titles for academics and professionals working in the geosciences, and enjoys an enviable international reputation for the quality of its work. The many areas in which we

publish in include:-Petroleum geology-Tectonics, structural geology and geodynamics-Stratigraphy, sedimentology and paleontology-Volcanology, magmatic studies and geochemistry-Remote sensing-History of geology-Regional geology guides
