Introduction The first time I saw a glass
greenhouse in a mountain area, where the
weather was very harsh, and still
vegetables were being grown under such
inclement conditions, I began to wonder
how many of us can really afford a glass
greenhouse, especially when the materials
are so expensive. That is why I am
writing this book to tell you about how you
can use cloches and glass in your vegetable
garden, and get plenty of fresh vegetables
all the year round, even when it is -10
outside. Glass covers to force vegetables
and fruit much before their normal, natural
seasonal harvest time, as well as protection
have been in long usage for centuries. It
has been noticed that tomatoes are one of
the best of all indoor crops for even a
newbie gardener and if you are growing
them under glass, they are going to be of a
higher quality than those grown outdoors.
Also, the harvest is going to be earlier than
the one which you are going to expect from
your outdoor crop. Remember that when
you are making a glass house, you are
giving your plants an opportunity to grow
in a temperature which, though artificially
controlled is making an atmosphere as if
they are growing outside, in one particular
season. I have already written a book
about Introduction to Sustainable
Greenhouse Gardening
http://www.amazon.com/Introduction-Sustainable-Greenhouse-GardeningGrowing/dp/1511775696/ref=sr_1_1?ie=UTF8&qid=1440090110&sr=8-1&keywords=greenhouse+gardening+dueep, for all those people

who like constructing things in their garden for protecting their plants and growing out of season things, even in winter. This book is going to give you more information, about the types of vegetables you can grow in these glasshouses under glass or under cloches, where you are going to get the greenhouse effect in a limited space.
