

Key Papers in Literature and Psychoanalysis (The IJPA Key Papers Series)

Since Freud invoked the Oedipus story to exemplify and verify his findings with patients and in analyzing his own dreams, psychoanalysis and literature have had a fruitful if often distrustful relationship. Literature and theory have increased enormously in range. Education no longer insists upon classics of Western literature as building blocks for understanding. Yet the tie between psychoanalysis and imaginative literature remains vital, and the two disciplines can interact vibrantly, as these selected essays of recent years from the International Journal of Psychoanalysis handsomely show. They explore overlaps of literary experience and psychoanalytic process, both of which activate our capacity to see feelingly, which is to say, provide occasion for a structured richness of knowing with a felt tie to truth. Both enhance consciousness, expand the emotions, undermine unconscious closures, and provoke thought; and it is those very qualities that inform their illustrative and explanatory usefulness to one another.
