NOAA Photo Library

This electronic book on CD-ROM presents a truly spectacular collection of over 500 photos taken by NOAA scientists involved in the National Undersea Research Program. NURP is the nations only federal scientific program that specializes in providing access to undersea technology. Subjects include: Sea Life, Midwater Vertebrates, Seafloor Vertebrates, Midwater Invertebrates, Seafloor Invertebrates, Marine Mammals, Seascapes, Coastal Ecosystems, Coral Reefs, Rocky Reefs, Artificial Reefs, Vents and Seeps, Submarine Mountains, Undersea Technologies, Scuba Divers and Wet Suits, Tethered Drivers, Tethered Robots, (ROVs), Free-Swimming or Autonomous Robots (AUVs), Submersibles, Undersea Labs (Habitats) & Observatories, Surface Support Vessels & Shore Labs, Undersea Explorers. This book-on-a- disc makes a superb reference work for undersea and nature enthusiasts, libraries, researchers, schools, students, and home reference! Our unique IMAGE GALLERY in Acrobat format reproduces the photos in a photo album suitable for quick full-screen browsing! Many of the photos are accompanied by the NOAA caption. This format was designed to mimic the look and feel of a real book. There is no need to laboriously import images into a slow-loading program. Weve also included the original image files, with some of the finest photographs provided in high resolution (about one MB per file). This CD-ROM is designed to provide a convenient user-friendly general reference work, utilizing the benefits of the Adobe Acrobat format to uniformly present thousands of pages that can be rapidly reviewed or printed without untold hours of tedious searching and downloading. Vast archives of important government information that might otherwise remain inaccessible are available for instant review. The documents are

reproduced using Adobe Acrobat PDF software - allowing direct viewing on Windows and Apple Macintosh systems. Reader software is included on the CD.
