

## Seed to Seed: Seed Saving and Growing Techniques for Vegetable Gardeners (Paperback)

An estimated 60 million Americans grow a portion of their own food in a vegetable garden. Their planting needs are supplied by 255 mail order seed companies, countless local outlets for seeds and plants, and the ever-present grocery store seed rack ... There have always been a substantial minority of gardeners, however, who bypass the garden seed industry completely by saving their own seeds from year to year. Some of these seed savers, remnants of a recently lost peasant agriculture which purchased nothing that could be produced at home, are still planting the same vegetable varieties that their great-grandparents grew. Other new converts to seed saving may be trying to save something special discovered along the way, or to obtain unique plant material not available commercially. Still others have simply been touched by the powerful satisfaction that comes from a garden which is genuinely self-perpetuating. --from the Introduction -
