

Surgery of Spinal Trauma

Written by outstanding spinal surgeons from top institutions throughout the United States, this reference presents an organized and rational approach to all aspects of spinal trauma--from evaluation and diagnosis to surgery and rehabilitation. The book provides expert insights into initial diagnosis and treatment concerns, surgical techniques specific to each spinal region, and guidelines for rehabilitation. Nearly 600 exceptional illustrations complement the text. The thorough and comprehensive coverage includes anatomy and surgical approaches, initial treatment and diagnosis of spinal cord injuries, radiographic evaluation, medical management and rehabilitation, traumatic injuries of the various spinal regions, and post-traumatic surgical considerations. Chapters are organized by spinal region--upper and lower cervical, cervicothoracic, thoracic, thoracolumbar, and lower lumbar. Specific concerns regarding trauma of the pediatric spine are also addressed.
