

Comparative Psychology: Or the Growth and Grades of Intelligence (Classic Reprint)

Excerpt from Comparative Psychology: Or the Growth and Grades of Intelligence
The advocates of the Empirical Philosophy are wont to criticise the Intuitional Philosophy in two respects; first, as overlooking the relation between the mature mind and the mind of the infant, between rudimentary and developed powers; and, second, as overlooking the still more important connection between the intelligence of to-day and that of remote previous periods, between the intelligence of man and that of animals, and of the earlier human life from which it has been derived. We grant these points to be well taken, especially the latter. Without tracing the history of intelligence, we are not prepared to decide what is primitive and what is acquired, what is original material and what is the deposit of growth. The empiricist cannot be fully and fairly met without traveling with him these spaces of evolution, and determining at least their general facts and laws. This I have undertaken in the present volume. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
