

AV-8B-408 External Environment Outwash Flow Speed and Temperature Survey

This is a NAVAL AIR WARFARE CENTER AIRCRAFT DIV PATUXENT RIVER MD report procured by the Pentagon and made available for public release. It has been reproduced in the best form available to the Pentagon. It is not spiral-bound, but rather assembled with Velobinding in a soft, white linen cover. The Storming Media report number is A170583. The abstract provided by the Pentagon follows: The outwash flow field around a hovering AV-8B aircraft with 408 engine was measured during two separate phases of testing. The aircraft gross weight varied between 16,100 to 19,600 lb. Testing consisted of taking velocity and temperature measurements at heights above the ground from 3 in. to 10 ft at 20 deg increments primarily about the aircrafts port side and at radial distances between 30 and 100 ft from the aircrafts hover center. Testing concentrated on 50 ft-AGL hovers although tests included, vertical takeoff, vertical landing, hover height variations from 30 to 125 ft-AGL (radar height) and gross weight changes of approximately 2,000 Lb. The outwash flow field was analyzed in the areas of flow field velocity, direction, and temperature in addition to velocity dynamics, temperature extremes, aerodynamic forces, and personnel hazards and limitations.
