

The Royal Tiger of Bengal: His Life and Death

This is an account of the tiger from the field-naturalists point of view, and, as is the case with every production of Dr. Fayrers pen, is full of interesting material and life-like description. After defining the tigers position in animal life, a brief anatomical sketch is given, after which its distribution, habits, and achievements are described. The whole is appropriately finished by an account, from the sportsmans point of view, of the various modes in which his death is accomplished with the usual accompaniment of a few tiger stories more or less bloody and sensational. The worst of the book is, its want of arrangement, scrappy character, and many marks of haste and carelessness which deform it. There is no division into chapters, no index, a list of discovered errata filling half a page, and several unnecessary and evidently unintentional repetitions. What is worth doing at all, is worth doing well, and Dr. Fayrer might have done this much better. *Edinburgh Medical Journal*, Vol. 21 [1876]
