

Why are They So Weird?: Whats Really Going on in a Teenagers Brain

As Strauch reveals, scientists now recognize that there is a biological component to why teenagers are so likely to slam the door and hide out in their rooms at the least provocation. There is a reason they are articulate and idealistic one moment, and incoherent and self-centered the next, or are so attracted to drugs, alcohol and high speeds. And its not just hormones. New studies show that far from stopping growing at seven or eleven, the brain undergoes a complete rewiring - particularly the frontal cortex, the part of the brain that governs logic and emotions - in adolescence. **WHY ARE THEY SO WEIRD?** offers a well-informed and entertaining roadmap to that exhilarating, infuriating and sometimes terrifying time.
