

## The Ultimate Guide to Companion Gardening for Beginners 2nd Edition: How to Use Companion Plants for a Successful Flower or Vegetable Garden (Gardening, ... Guide, Companion Container Gardening)

The Ultimate Guide to Companion Gardening for Beginners 2nd Edition: How to Use Companion Plants for a Successful Flower or Vegetable Garden JUST RELEASED 2ND EDITION! Companion gardening is just planting certain plants together because they will help each other grow and become healthier. It is said that companion gardening is even better than using fertilizers or artificial ways of letting plants grow because the plants can benefit from each other and its all a natural process. Some of the basics of Companion Gardening: Tall plants are planted near shorter plants so they could some shade for the shorter plants. This works best between sunflowers and corn. Companion Plants can lure away pests from green leafy vegetables, and they can also attract beneficial insects to help in the pollination of flowers. For instance, aphids are attracted to plants like Nasturtium, this lures them away from the other plants in the garden. You can plant two plants on the same patch which will save you space and time. Incompatible Pairings include planting garlic and onions near peas and beans. Because doing so will stunt the growth of the peas and beans. It would be best for you to record what is happening in your garden via a logbook or a gardening journal so that you can observe which plants are good with each other and which plants are not.
