

Psychology of Literacy

What are the intrinsic differences between the literate and the illiterate mind? The Vai, a small West African group, developed their own system of writing that flourishes today, although no body of written literature exists and about half of those literate in Vai have never had formal schooling. Given this situation, Scribner and Cole were able to test more than 1,000 subjects over a four-year period to measure the mental advantage of literates over nonliterate. An ambitious and important book ambitious in scope and its continual reevaluation of aims and methods ... and important for putting heretofore unexamined presumptions regarding the cognitive effects of literacy to empirical test Language and Society
