

Wildlife Conservation on Farmland Volume 1: Managing for Nature on Lowland Farms

This innovative two-volume book highlights and examines the most important challenges facing farmers, conservationists, and policy makers, using examples of real-life, linked studies from a farmed landscape, which bridge the divide between the theory and practice of wildlife conservation on farmland. This set brings together Volume 1: Managing for nature on lowland farms and Volume 2: Conflict in the countryside. Volume 1 Using more than 30 years research from the author team at the Wildlife Conservation Research Unit (WildCRU), this volume reveals how agricultural systems and wildlife interact, presenting examples from scales varying from landscape to microcosm, from populations to individuals, covering plants, invertebrates, birds, and mammals. It demonstrates the essential ecosystem services provided by agricultural land, and discusses the implications of agricultural development for natural habitats and biodiversity. Volume 2 Many of the encounters between farming and wildlife, especially vertebrates, involve some level of conflict which can cause disadvantage to both the wildlife and the people involved. Through a series of WildCRU case-studies, this volume investigates the sources of the problems, and ultimately of the threats to conservation, discussing a variety of remedies and mitigations, and demonstrating the benefits of evidence-based, inter-disciplinary policy.
