We all love to grow beautiful plants and flowers in our yards. When spring comes, it is only natural to want to get out there and get our hands dirty. Well, the one thing that we don't want to do is spend a lot of money on planting materials and chemicals that we don't want in our food and flowers anyway. So what are we to do? Well, this is where composting comes in. When we start building our own compost, we are building our own natural fertilizer and growing materials. Since we are creating these compost piles ourselves we know what is going to them and what is not.
