

Yellowstone Super Volcano... Remnants Of A Celestial Impact: Evidence so compelling and powerful... It will turn the scientific community on its head!

Evidence that Yellowstone Super-Volcano is a remnant of a massive asteroid impact with earth. Packed with some eye opening facts! The impact creating a bore 30 to 62 miles in diameter, and the projectile penetrating over 310 miles deep, and very possibly half way to the earth's core! With documentation that this is a impact crater and Yellowstone Super Volcano is still reeling from that collision over 65 million years ago. Was this the real KT boundary event? Is this evidence of a Shoemaker Levy event here on earth? How big was the impact? Is there geological evidence for a impact? Is there a smoking gun that points to a collision with earth? What would happen if this were to happen again today, would mankind survive? All of these and more are examined in the book. Documentation that gives compelling proof that Yellowstone Super-Volcano is a Celestial Impact Crater That Is Still Reeling To This Day! Full Color --- Packed With Several Full Color Detailed Images Of The Impact Crater And Documented Evidence That This Is The Largest Impact Crater On Earth. Detailed Images Explaining How The Asteroid Impact Is The Cause Of The Ongoing Eruptions At Yellowstone Today. Contact The Author At Email: Rick@Magma-Tech.us
